

CINOT AND ONTARIO WORKS DENTAL PROGRAMS CRITERIA FOR THE EXTRACTION OF THIRD MOLARS

The prophylactic extraction of third molars is not covered by either the CINOT Program or the Ontario Works Dental Programs (both for under 18 years and Adult) administered by the Simcoe Muskoka District Health Unit. To help clarify the coverage provided by both programs with respect to the extraction of third molars, the following criteria have been established.

Although evidence based, the following criteria are for the purpose of administration of the programs identified above and are not meant to represent a standard of practice.

Criteria for coverage under the CINOT or OW Dental Programs for the removal of third molars:

► If partially erupted

1. Advance dental decay
2. Repeated pericoronitis

► If completely covered by bone

3. Disease of the follicle including cysts, tumours etc.
4. Internal/external resorption of the tooth or adjacent tooth

When submitting a claim or a predetermination for the extraction of one or more third molars, please indicate, for each tooth, the applicable criteria.

(Listing the applicable number 1 – 4 is acceptable.)

Client's Name: _____

Dentist's Signature: _____

Tooth #	Criteria 1, 2, 3, 4
18	
28	
38	
48	

Thank you for your co-operation.
