

PROPER HAND SANITIZING

Alcohol-based hand sanitizer is an effective way to clean your hands if they are not visibly soiled or dirty. Be sure the product contains minimum 60% alcohol content.

1

Apply a loonie-sized amount of hand sanitizer to the palms.

2

Rub hands together, covering all areas including the backs of hands; do not use water.

3

Rub fingertips of each hand in the opposite palm.

4

Rub until hands are dry; paper towels are not needed.
