Weekly Influenza News

Week 47: November 17 to November 23, 2019

Week in Review:

Influenza Activity Indicator	Assessment of Indicator*	Interpretation	
	Higher	5 local lab-confirmed case reported in week 47; 0 cases reported in week 46	
Percent Positive of Flu Specimens [↑]	Similar	Simcoe Muskoka - flu A: 0.0%; flu B: 0.0% Ontario - flu A: 1.6%; flu B: 0.2%	
	Similar	No influenza outbreaks reported for the 2019-20 season to date.	
Local Emergency Department respiratory visits: week 47	Similar	Percentage of visits is similar to previous week and to same period for the 2018-19 season.	
Week 47 Overall Assessment November 17 to November 23, 2019		Reported Activity Level: Sporadic	
	Higher	Four cases of Flu A reported in SMDHU One case of Flu B reported in SMDHU	
	Higher		

Predominant Influenza Strains: Not available

Notes: Reported activity level is based on the weekly submissions to Public Health Ontario. Definition available here.

*Compared to previous surveillance week

† Reported for week 46

Reported Local Influenza Cases

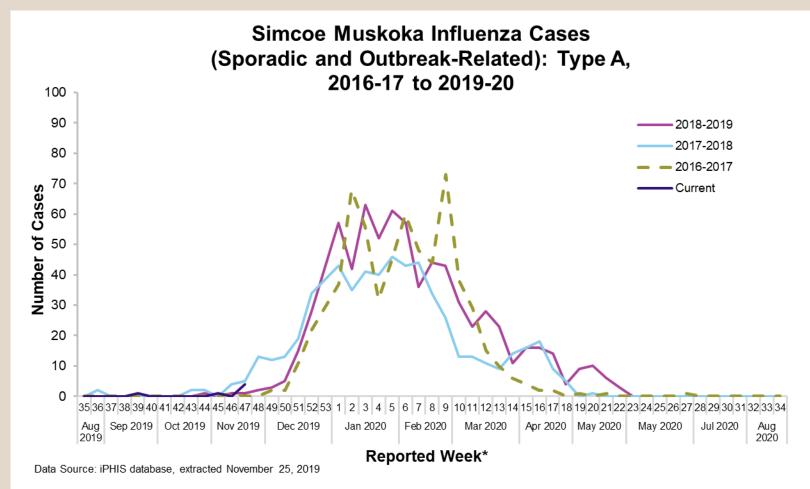

In Simcoe Muskoka, there has been **ten lab-confirmed influenza cases reported** as of 25 November 2019. Five cases of influenza were reported in week 47.

Of the nine reported influenza A cases, three have been subtyped as influenza A, H3 strain.

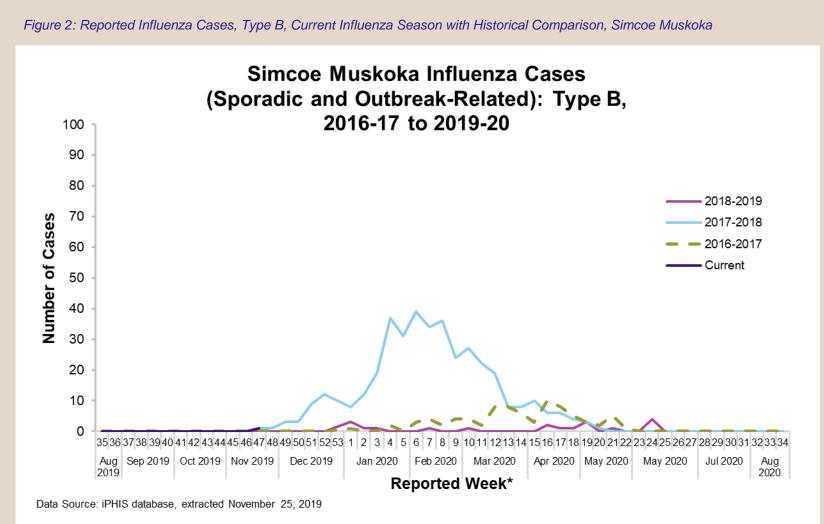

Lab-confirmed Influenza Cases	Week 47		Season-to-Date		
Lab-commed innuenza cases	N	%	N	%	
Influenza A	4	80%	9	90%	
Influenza B	1	20%	1	10%	
Influenza A & B	0	0%	0	0%	
Total	5	100%	10	100%	
Notes: Data source: Communicable Disease Intake Database, extracted on November 5, 2019.					

Historical Comparison

Figure 1: Reported Influenza Cases, Type A, Current Influenza Season with Historical Comparison, Simcoe Muskoka

*Case counts are based on reported date. Reported date is on average 7-10 days after onset date. For comparability between years, the surveillance week number is used in this graph. The alignment with the dates for the 2018-19 influenza season is provided for reference. Week 1 always corresponds with the week in which January 1 lands.

Percent positivity

Note: Percent positivity is reported with one week lag and does not included week 47.

The percentage of flu specimens that are positive (<u>percent positivity</u>) for Influenza A and Influenza B remains low. The provincial percent positivity for influenza A in week 46 was reported at 1.6%, which is similar when compared to week 45. Influenza B percent positivity was reported at 0.2% for week 46.

Locally percent positivity data was 0% for both flu A and flu B for week 46.

Specimen Submission Surveillance Week by Month

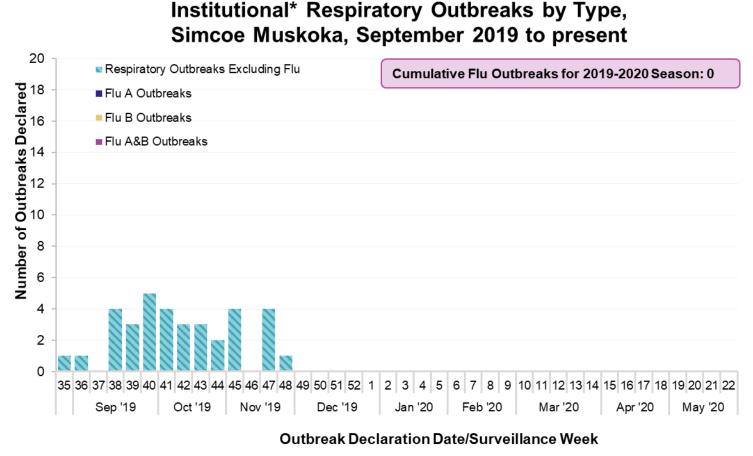

Data Source: Public Health Ontario. Laboratory-Based Respiratory Pathogen Surveillance Report, extracted November 25, 2019

* Simcoe Muskoka percent positivity is based on relatively small numbers of positive tests and should be interpreted with caution. Data in this figure are reported with one week lag and do not include the most recently completed surveillance week.

Institutional Respiratory Outbreaks

There have been no *lab-confirmed institutional flu outbreaks* in Simcoe Muskoka since September 1, 2019.

Figure 4: Institutional Outbreaks by Respiratory Pathogen, Simcoe Muskoka, 2019-20

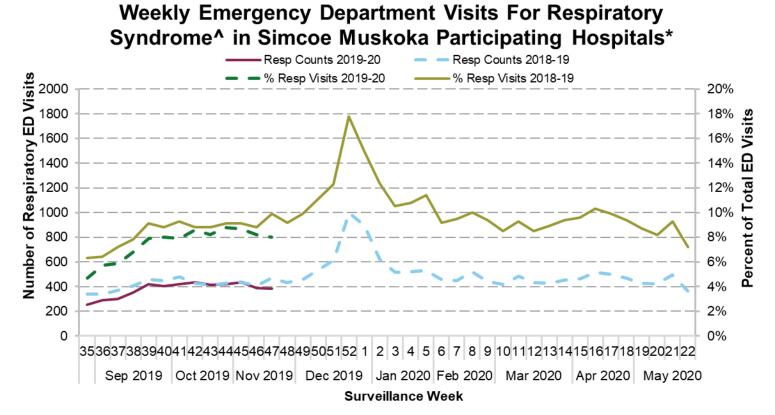

Data Source: SMDHU Outbreak Log, 2018-19, extracted November 25, 2019.

* Confirmed outbreaks. Institutions can include acute care facilities, long term care facilities, retirement homes and child care facilities.

Local Emergency Department Visits

Emergency department visits for respiratory syndrome in Simcoe Muskoka accounted for 8.0% of visits in week 47. This is similar when compared to week 46, and similar when compared to the same point in the 2018-19 season.

Figure 5: Emergency Department Visits for Respiratory Syndrome at Participating Simcoe Muskoka Hospitals, 2018-19, 2019-20 Seasons

Data Source: Acute Care Enhanced Surveillance (ACES) System, extracted November 25, 2019

Data is considered preliminary and subject to change.

^A Respiratory syndrome is defined as "respiratory infection non croup, non bronchiolitis. Includes sore throat, cough, cold, ear infection, blocked ear, earache etc". This syndrome does not include influenza-like illness, which is "fever, myalgia, undifferentiated flu".

*Participating hospitals are: RVH, OSMH, MAH (Bracebridge and Huntsville), GBGH and CGMH. Includes Simcoe Muskoka residents and visitors.

The above data is provided through Acute Care Enhanced Surveillance (ACES), an emergency department (ED) syndromic surveillance system managed by <u>KFLA Public Health Informatics</u> for participating Ontario hospitals. Six hospitals participate in Simcoe Muskoka.

Vaccine Match and Influenza Strains

The trivalent 2019-2020 influenza vaccine for the northern hemisphere contains the following strains:

- A/Kansas/14/2017(H3N2)-like;
- A/Brisbane/02/2018(H1N1)pdm09-like; and
- B/Colorado/06/2017-like virus (B/Victoria/2/87 lineage).

Table 2: Local, Provincial and National Matched and Mismatched Flu Specimens and National Match Percent, 2019-20

Influenza Strains	Number of Specimens with Strain Characterization Results		National Match	
	Ontario	Canada	Percent [†]	
Influenza A Vaccine Strains				
Influenza A (H3N2) A/Kansas/14/2017(H3N2)-like	3	8	22%	
Influenza A (H1N1) A/Brisbane/02/2018(H1N1)pdm09-like	2	8	22%	
B/Colorado/06/2017-like	4	9	100%	
B/Phuket/3073/2013-like virus (Quad vaccine only)	0	0	0%	

Data Source: Public Health Ontario. Laboratory-Based Respiratory Pathogen Surveillance Report – Week 46; Public Health Agency of Canada. Flu Watch – Week 46

Provincial and national counts are reported with one week lag and do not include the most recently completed surveillance week. Surveillance weeks can be found here (pg 9).

† Non-vaccine match strains are not reported. Match percent is calculated based on total isolates characterized for each of flu A and flu B. Match percent is based primarily on antigenically similar strains. Antigenic similarity may not be reflective of influenza vaccine effectiveness.

Technical Notes

Definitions

<u>Percentage positivity</u>: the number of positive flu cases divided by the number of specimens tested at Public Health Ontario Labs

<u>Reported activity level</u>: the level of influenza activity that is reported to Public Health Ontario by Simcoe Muskoka, based on influenza cases and outbreaks. Definitions available <u>here</u> (pg 9).

<u>Surveillance week</u>: The week number corresponding to the week of year, running Sunday to Saturday, inclusive, for reporting influenza activity. January 1 always falls within week 1. A list of the current season's surveillance weeks can be found <u>here</u>.

Limitations

Timeliness:

The provincial data are from one week previous because that is the most recent data available.

The hospital data, local counts of influenza, and outbreaks are current to date.

The number of cases listed in a given surveillance week may change as more information becomes available

Case-Follow-up and iPHIS Data Entry:

While Public Health Ontario only requires case information as provided by the laboratory report, the health unit investigates all outbreak cases, as information is available, in order to provide a more accurate local picture of adverse outcomes and subtyping.

Case Reporting:

Sporadic cases do not accurately describe all cases of influenza as those cases reported are skewed towards individuals more likely to seek medical care and be tested (e.g. young, elderly and immunocompromised).
