

Week 13: March 26 to April 1, 2023

Week in Review:

Virus Activity Indicator	Influenza Assessment*	COVID-19 Assessment*	Interpretation
<u>Weekly Reported Cases</u>	Similar	Similar	<p>For week 13:</p> <ul style="list-style-type: none"> Influenza: 3; COVID-19: 154 <p>For the previous week (week 12):</p> <ul style="list-style-type: none"> Influenza 6; COVID-19: 148
<u>Percent Positive Specimens</u>	Similar†	Similar	<p>Simcoe Muskoka:</p> <ul style="list-style-type: none"> Flu A† (0.0%); Flu B† (5.9%), COVID-19: (10.8%) <p>Ontario:</p> <ul style="list-style-type: none"> Flu A† (0.3%); Flu B† (0.7%), COVID-19: (8.5%)
<u>Local Institutional Outbreaks</u>	Similar	Similar	<p>Institutional outbreaks declared in week 13:</p> <ul style="list-style-type: none"> Influenza: 0 (season to date: 8) COVID-19: 3 (season to date: 187) Influenza & COVID-19: 0 (season to date: 5)
Week 13 Assessment March 26 to April 1, 2023	Similar	Similar	<p>Influenza Activity Level: Sporadic 0 flu A and 3 flu B cases reported this week</p> <p>COVID-19 Community Risk†: Moderate COVID-19 case counts are similar this week</p>
<u>Predominant^ Circulating Respiratory Viruses:</u> COVID-19 (Omicron), Human metapneumovirus, Enterovirus/rhinovirus, Adenovirus			
<u>Local Emergency Department Respiratory Visits</u>	Similar		Percentage of visits is similar compared to previous week and higher compared to same week in 2021-22

Notes: Reported influenza activity level is based on activity levels as per [Influenza activity reporting in the Ontario Surveillance Package](#). COVID-19 Risk level is based on the risk level from the [Simcoe Muskoka Community Risk Level](#). Additional definitions are available [here](#).

* Compared to previous [surveillance week](#). Assessment of percent positivity for influenza is based on provincial numbers due to small numbers.

† Reported for week 12

^ Predominant is defined as any virus where provincial percent positivity is >10% as reported through [PHO's respiratory virus overview in Ontario report – Tables 3A and 3B](#).

Weekly Reported Cases

Influenza: In Simcoe Muskoka, there have been **875 lab-confirmed influenza cases reported** as of 4 April 2023; **3 (<1%) of which were reported in week 13** – this is similar when compared to week 12.

Of the 865 reported influenza A cases, 327 have been subtyped:

- 318/327 (97%) are influenza A, H3 strain
- 9/327 (3%) are influenza A, H1N1 pdm09

COVID-19: In Simcoe Muskoka, there have been **154 lab-confirmed COVID-19 cases reported** in week 13 – this was similar when compared to week 12. Omicron is the dominant circulating variant.

Table 1: Summary of Influenza and COVID-19 Cases, 2022-23 Season

Lab-confirmed Cases	Week 13	Season-to-Date
Influenza	3	875
Influenza A	0 (0%)	865 (99%)
Influenza B	3 (100%)	10 (1%)
Influenza A & B	0 (0%)	0 (0%)
COVID-19	154	8,171
Data source: Case and Contact Management (CCM) System and Integrated Public Health Information System (iPHIS), extracted on April 04, 2023.		
Notes: Season-to-Date includes cases reported from the Sunday of the week in which September 1, 2022 falls (i.e., August 28, 2022 onwards).		

Age Distribution

Influenza: For the season-to-date, 23% (n=202) of cases have been reported in individuals aged 65 and older and 6% (n=53) of cases have been reported in the <1 years of age group.

Median age of reported influenza cases: **14.5 years**

COVID-19: For the season-to-date, 46% (n=3,795) of cases have been reported in individuals aged 65 and older and 1% (n=87) of cases have been reported in the <1 years of age group.

Median age of reported COVID-19 cases: **62.3 years**

Figure 1: Number and Age-specific Rate for Influenza and COVID-19 by Age Group, Simcoe Muskoka, September 2022 to present

Data Source: Integrated Public Health Information System (iPHIS) & Public Health Case and Contact Management Solution (CCM), extracted by SMDHU on 4 Apr 2023. Population Estimates, Intellihealth, extracted January 2023.

The 2022 population estimates for Simcoe Muskoka were used to calculate age-specific rates.

Percent Positivity

For week 12, the percentage of influenza specimens that are positive (percent positivity) for **Influenza A is similar** compared to the previous week provincially. For week 13, local **COVID-19 percent positivity is similar** compared to the previous week.

Table 2: Percent Positivity for Influenza (week 12) and COVID-19 (week 13), Simcoe Muskoka and Ontario

Region	Influenza A*	Influenza B*	COVID-19
Simcoe Muskoka	0.0%	5.9%	10.8%
Ontario	0.3%	0.7%	8.5%

Data source: Public Health Ontario Respiratory Virus Overview in Ontario, extracted on April 04, 2023. Summarized data from Ontario Lab Information System (OLIS) COVID-19 test data from Ministry of Health SAS Visual Analytics COVID-19 Testing Report, extracted on April 4, 2023
Note: *Influenza percent positivity is reported with a one week lag and does not include week 13. COVID-19 percent positivity is reported for week 13; provincial data is incomplete and should be interpreted with caution.

Figure 2: Percent Positivity, Influenza A & B, COVID-19, Simcoe Muskoka & Ontario, 2022-23 Season

Data Source: Public Health Ontario Respiratory Pathogen Bulletin, extracted on 4 Apr 2023. Government of Ontario. 2020. Status of COVID-19 Cases in Ontario. Ontario Open Data. Ministry of Health. 2020. Ontario Lab Information System (OLIS) COVID-19 test data from Ministry of Health SAS Visual Analytics COVID-19 Testing Report, extracted on 30 Mar 2023.

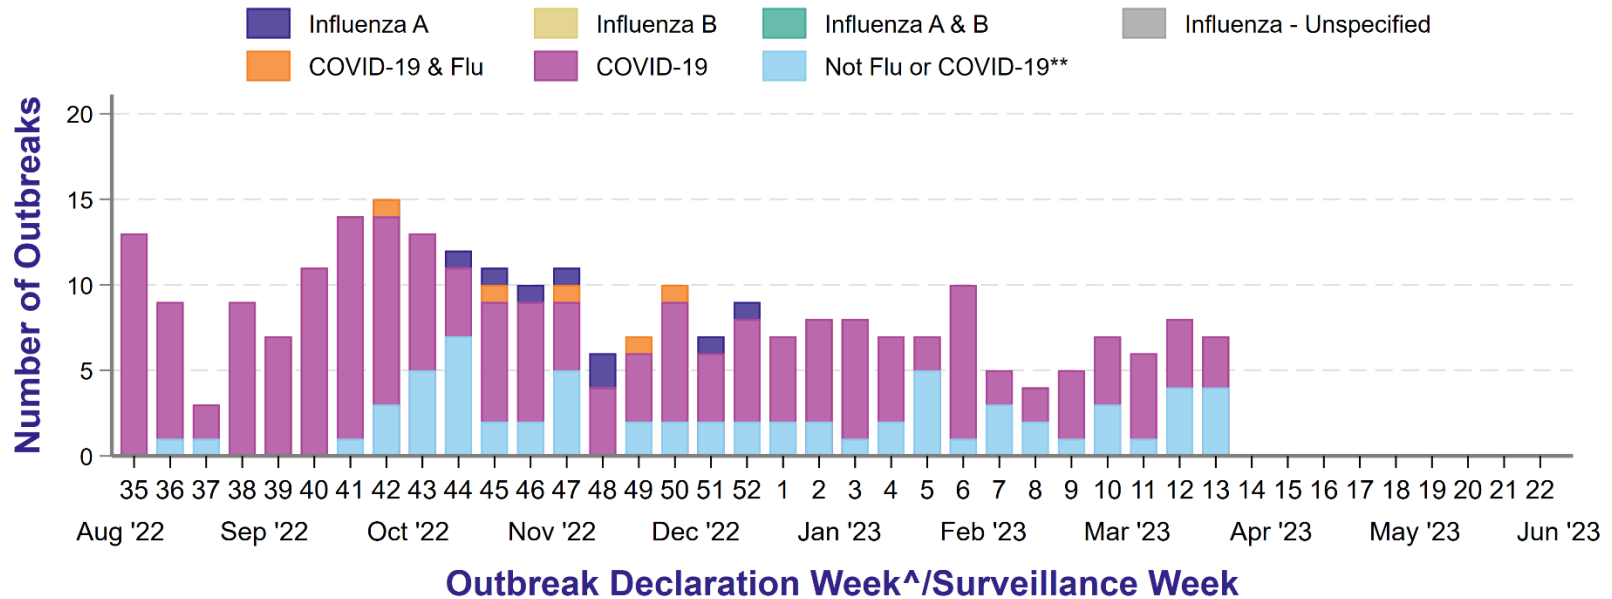

* Flu A and B specimens only include those tested at public health laboratories in Ontario. COVID-19 specimens are limited to those undergoing PCR testing. Note: Simcoe Muskoka percent positivity, particularly for influenza, is based on small numbers of positive tests and should be interpreted with caution. Influenza data in this figure are reported with one week lag and do not include the most recently completed surveillance week. COVID-19 data may be incomplete.

Institutional Respiratory Outbreaks

There have been 8 *lab-confirmed institutional influenza outbreaks*, 187 *lab-confirmed institutional COVID-19 outbreaks* and 5 *COVID-19/influenza outbreak* in Simcoe Muskoka since September 1, 2022:

- Influenza A: 8 outbreaks
- Influenza B: 0 outbreaks
- Influenza A and B: 0 outbreaks
- Influenza & COVID-19: 5 outbreaks

Figure 3: Institutional Outbreaks by Respiratory Pathogen, Simcoe Muskoka, 2022-23 Season

Data Source: Integrated Public Health Information System (iPHIS) & Public Health Case and Contact Management Solution (CCM) extracted by SMDHU on 4 Apr 2023.

* Confirmed outbreaks only. Institutions can include acute care facilities, long-term care homes, retirement homes, corrections facilities and childcare facilities.

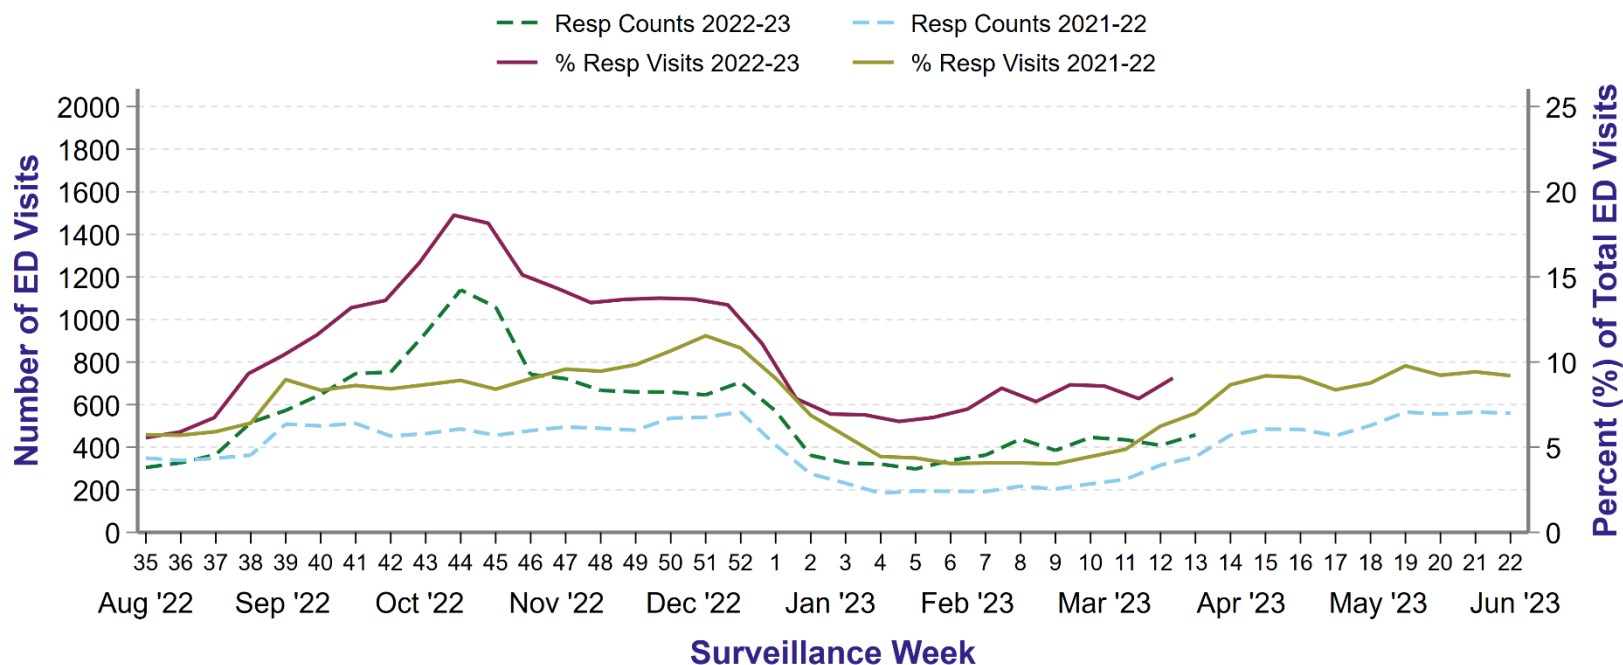

**Includes outbreaks where a respiratory pathogen other than influenza and COVID-19 identified, or no pathogen was identified.

^Week declared is the week (Sun-Sat) in which the outbreak became a confirmed outbreak.

Local Emergency Department Visits

Emergency department (ED) visits for respiratory syndrome in Simcoe Muskoka accounted for **9.1% of visits in week 13**. This is **similar** when compared to week 12, and **higher** when compared to the same time in the 2021-22 season.

Figure 4: Emergency Department Visits for Respiratory Syndrome at Participating Simcoe Muskoka Hospitals, 2021-22 and 2022-23 Seasons

Data Source: Acute Care Enhanced Surveillance (ACES) System, extracted on 4 Apr 2023

^ Respiratory syndrome is defined as 'respiratory infection non-croup, non-bronchiolitis. Includes sore throat, cough, cold, ear infection, blocked ear, earache, etc.' This syndrome does not include influenza-like illness, which is 'fever, myalgia, undifferentiated flu.'

* Participating hospitals are RVH, OSMH, MAH (Bracebridge and Huntsville), GBGH, CGMH and SVMH; includes Simcoe Muskoka residents and visitors.

The above data is provided through Acute Care Enhanced Surveillance (ACES), an emergency department (ED) syndromic surveillance system managed by KFLA Public Health Informatics for participating Ontario hospitals. Seven hospitals participate in Simcoe Muskoka.

Influenza Vaccine Match and Influenza Strains

The quadrivalent 2022-2023 cell culture-based or recombinant-based influenza vaccine for the northern hemisphere contains the following strains:

- A/Darwin/6/2021 (H3N2)-like virus;
- A/Wisconsin/588/2019 (H1N1)pdm09-like virus;
- B/Austria/1359417/2021 (B/Victoria lineage)-like virus; and
- B/Phuket/3073/2013 (B/Yamagata lineage)-like virus.

Table 3: Local, Provincial and National Matched and Mismatched Influenza Specimens and National Match Percent, 2022-23 Season

Influenza Strains	Number of Specimens with Strain Characterization Results		National Match Percent [†]
	Ontario	Canada	
Influenza A Vaccine Strains			
Influenza A (H3N2) A/Darwin/6/2021-like	40	370	91%
Influenza A (H1N1) A/Wisconsin/588/2019 pdm09-like	7	34	8%
Influenza B Vaccine Strains			
B/Austria/1359417/2021 (B/Victoria)-like	3	7	100%
B/Phuket/3073/2013 (B/Yamagata)-like (Quad vaccine only)	0	0	0%

Data Source: Government of Canada, [FluWatch Surveillance Report](#) – weeks 10-11 and Public Health Ontario. Respiratory Virus Overview in Ontario Report. Influenza Strain Characterization, extracted April 4, 2023.

Provincial and national counts are reported with one week lag and do not include the most recently completed surveillance week. Surveillance weeks can be found [here](#).

[†] Non-vaccine match strains are not reported. Percent match is based on antigenically similar strains. Denominator = 409 (Flu A), 7 (Flu B). As of week 12, an additional 5 specimens did not grow to sufficient hemagglutination titers for antigenic characterization, but were found to be of the same genetic group as A/Darwin/6/2021 (H3N2)-like virus through sequence analysis.

NR = Not Reported

Technical Notes

Definitions

Percent positivity: The number of positive influenza or COVID-19 cases divided by the number of specimens tested. For influenza this is limited to specimens tested at Public Health Ontario Labs. For COVID-19, it is limited to PCR testing.

Reported activity level: The level of influenza activity that is reported to Public Health Ontario by Simcoe Muskoka, based on influenza cases and outbreaks. Definitions available [here](#).

Reported community risk level: The level of COVID-19 risk based on the Simcoe Muskoka [COVID-19 Community Risk Level](#).

Surveillance week: The week number corresponding to the week of year, running Sunday to Saturday, inclusive, for reporting influenza activity. January 1 always falls within week 1. A list of the current season's surveillance weeks can be found [here](#).

Limitations

Timeliness: The provincial data are lagged by one week compared to all other data presented in this update due to data availability. The emergency department data, local counts of influenza and COVID-19, and outbreaks are current to date.

The number of cases and/or outbreaks and percent positivity reported for a given surveillance week may change as more information becomes available.

Case Reporting: Sporadic cases do not accurately describe all cases of influenza and/or COVID-19 as those cases reported are skewed towards individuals more likely to seek medical care and be tested (e.g., young, elderly and immunocompromised) as well as healthcare workers.

Cases are reported based on where the individual normally lives which may not match where they acquired the illness.

Data Comparison: The indicators used in this report are different from those presented in the [COVID-19 Community Risk Level](#) and cannot be directly compared. Differences may be due to data reporting lag and/or indicator definitions.

Week 12 Provincial Summary:

For the 2022-2023 surveillance season to week 12:

Influenza: 21,593 laboratory-confirmed influenza cases have been reported across Ontario, 164 (0.8%) of which were reported in week 12. Among cumulative cases, 97.2% (20,984/21,593) are influenza A. Of the 6,403 reported influenza A cases with subtype information available, 96.5% (6,178/6,403) were H3 and 3.5% (225/6,403) were (H1N1)pdm09.

COVID-19: 186,965 laboratory-confirmed COVID-19 cases have been reported across Ontario, 3,405 of which were reported in week 12. Omicron is the dominant variant circulating.
