## Week 25: June 19 to June 25, 2022

### Week in Review:

Influenza Activity Indicator	Assessment of Indicator*	Interpretation
 <u>Reported cases</u>	Similar	1 local lab-confirmed cases reported in week 25; 1 case reported in week 24
<u>Percent Positive of Flu Specimens</u> <sup>†</sup>	Lower	Simcoe Muskoka: - flu A: 0.0%; flu B: 0.0% Ontario: - flu A: 2.0%; flu B: 0.0%
<u>Local Institutional Outbreaks</u>	Similar	No institutional flu outbreaks declared in week 25; 0 in week 24 Total in 2021/2022: one outbreak
<u>Local Emergency Department respiratory visits: week 25</u>	Similar	Percentage of visits is <i>similar</i> compared to previous week and <i>higher</i> compared to the same period in the 2020-21 season
Week 25 Overall Assessment June 19 to June 25, 2022	Similar	Reported Activity Level: Sporadic
		1 case of Flu A in SMDHU this week 0 cases of Flu B in SMDHU this week
<u>Predominant Influenza Strains:</u> H3		

**Notes:** Reported activity level is based on definitions available [here](#).

\*Compared to previous [surveillance week](#)

† Reported for week 24. Assessment of indicator based primarily on provincial percent positivity

## Reported Local Influenza Cases

In Simcoe Muskoka, there have been **36 lab-confirmed influenza cases reported** as of 28 June 2022 - 1 case (3%) of influenza was reported in week 25.

Of the 36 reported influenza A cases, 7 have been subtyped:

- 7/7 (100%) are influenza A, H3 strain
- 0/7 (0%) are influenza A, H1 strain/ H1N1 pdm09.

*Table 1: Summary of influenza cases for 2021-22 season*

Lab-confirmed Influenza Cases	Week 25		Season-to-Date	
	N	%	N	%
Influenza A	1	100%	36	100%
Influenza B	0	0%	0	0%
Influenza A & B	0	0%	0	0%
<b>Total</b>	<b>1</b>	<b>100%</b>	<b>36</b>	<b>100%</b>
Notes:				
Data source: Integrated Public Health Information System (iPHIS), extracted on June 28, 2022.				

## Technical Notes

### Definitions

Percentage positivity: the number of positive flu cases divided by the number of specimens tested at Public Health Ontario Labs

Reported activity level: the level of influenza activity that is reported to Public Health Ontario by Simcoe Muskoka, based on influenza cases and outbreaks. Definitions available [here](#) (page 8)

Surveillance week: The week number corresponding to the week of year, running Sunday to Saturday, inclusive, for reporting influenza activity. January 1 always falls within week 1. A list of the current season's surveillance weeks can be found [here](#) (Appendix B)

### Limitations

#### Timeliness:

The provincial data are from one week previous because that is the most recent data available.

The hospital data, local counts of influenza, and outbreaks are current to date.

The number of cases listed in a given surveillance week may change as more information becomes available

#### Case-Follow-up and iPHIS Data Entry:

While Public Health Ontario only requires case information as provided by the laboratory report, the health unit investigates outbreak cases, as information is available, in order to provide a more accurate local picture of adverse outcomes and subtyping.

#### Case Reporting:

Sporadic cases do not accurately describe all cases of influenza as those cases reported are skewed towards individuals more likely to seek medical care and be tested (e.g. young, elderly and immunocompromised).

**Week 24 Provincial Summary\***: For the 2021-2022 surveillance season to week 24, 1,672 laboratory-confirmed influenza cases have been reported across Ontario, 70 (4%) of which were reported in week 24. Among cumulative cases, 99% (1660/1672) have been influenza A.

(Source: Public Health Ontario Respiratory Pathogen Bulletin, Surveillance Week 24, extracted June 28, 2022).

\*Note the number of cases in most recent week may not match Percent Positive indicator in Table on page 1. This is because the Percent Positive is based on specimens tested at Public Health Ontario labs only, and the provincial summary above includes reported cases from all labs in Ontario, including hospitals and other private labs.
