

Week 44: October 29 to November 4, 2023

Week in Review:

Virus Activity Indicator	Influenza Assessment*	COVID-19 Assessment*	Interpretation
<u>Weekly Reported Cases</u>	Similar	Similar	<p>For week 44:</p> <ul style="list-style-type: none"> Influenza: 2; COVID-19: 113 <p>For the previous week (week 43):</p> <ul style="list-style-type: none"> Influenza 1; COVID-19: 126
<u>Percent Positive Specimens</u>	Similar [†]	Similar	<p>Simcoe Muskoka:</p> <ul style="list-style-type: none"> Flu A[†] (0.0%); Flu B[†] (0.0%), COVID-19: (18.6%) <p>Ontario:</p> <ul style="list-style-type: none"> Flu A[†] (0.3%); Flu B[†] (0.0%), COVID-19: (17.6%)
<u>Local Institutional Outbreaks</u>	Similar	Similar	<p>Institutional outbreaks declared in week 44:</p> <ul style="list-style-type: none"> Influenza: 0 (season to date: 1) COVID-19: 9 (season to date: 49) RSV: 0 (season to date: 4)
Week 44 Assessment October 29 to November 4, 2023	Similar	Similar	<p>Influenza Activity Level: Sporadic 2 flu A and 0 flu B cases reported this week</p> <p>COVID-19 Community Risk[†]: Moderate COVID-19 case counts are similar this week</p>
<u>Predominant[^] Circulating Respiratory Viruses:</u> COVID-19, Enterovirus/rhinovirus			
<u>Local Emergency Department Respiratory Visits</u>	Similar		Percentage of visits is similar compared to previous week and lower compared to same week in 2022-23

Notes: Reported influenza activity level is based on activity levels as per [Influenza activity reporting in the Ontario Surveillance Package](#). COVID-19 Risk level is based on the risk level from the [Simcoe Muskoka Community Risk Level](#). Additional definitions are available [here](#). NA = Not Available

* Compared to previous [surveillance week](#). Assessment of percent positivity for influenza and COVID-19 is based on provincial numbers due to small numbers.

[†] Reported for week 43

[^] Predominant is defined as any virus where provincial percent positivity is >10% as reported through [PHO's Ontario Respiratory Virus Tool - Summary - Overall Respiratory virus activity](#)

Weekly Reported Cases

Influenza: In Simcoe Muskoka, there have been **12 lab-confirmed influenza cases reported** as of 7 November 2023; **2 (17%) of which were reported in week 44** – this is similar when compared to week 43.

Of the 11 reported influenza A cases, eight have been subtyped:

- 0/8 (0%) are influenza A, H3 strain
- 8/8 (100%) are influenza A, H1N1 pdm09

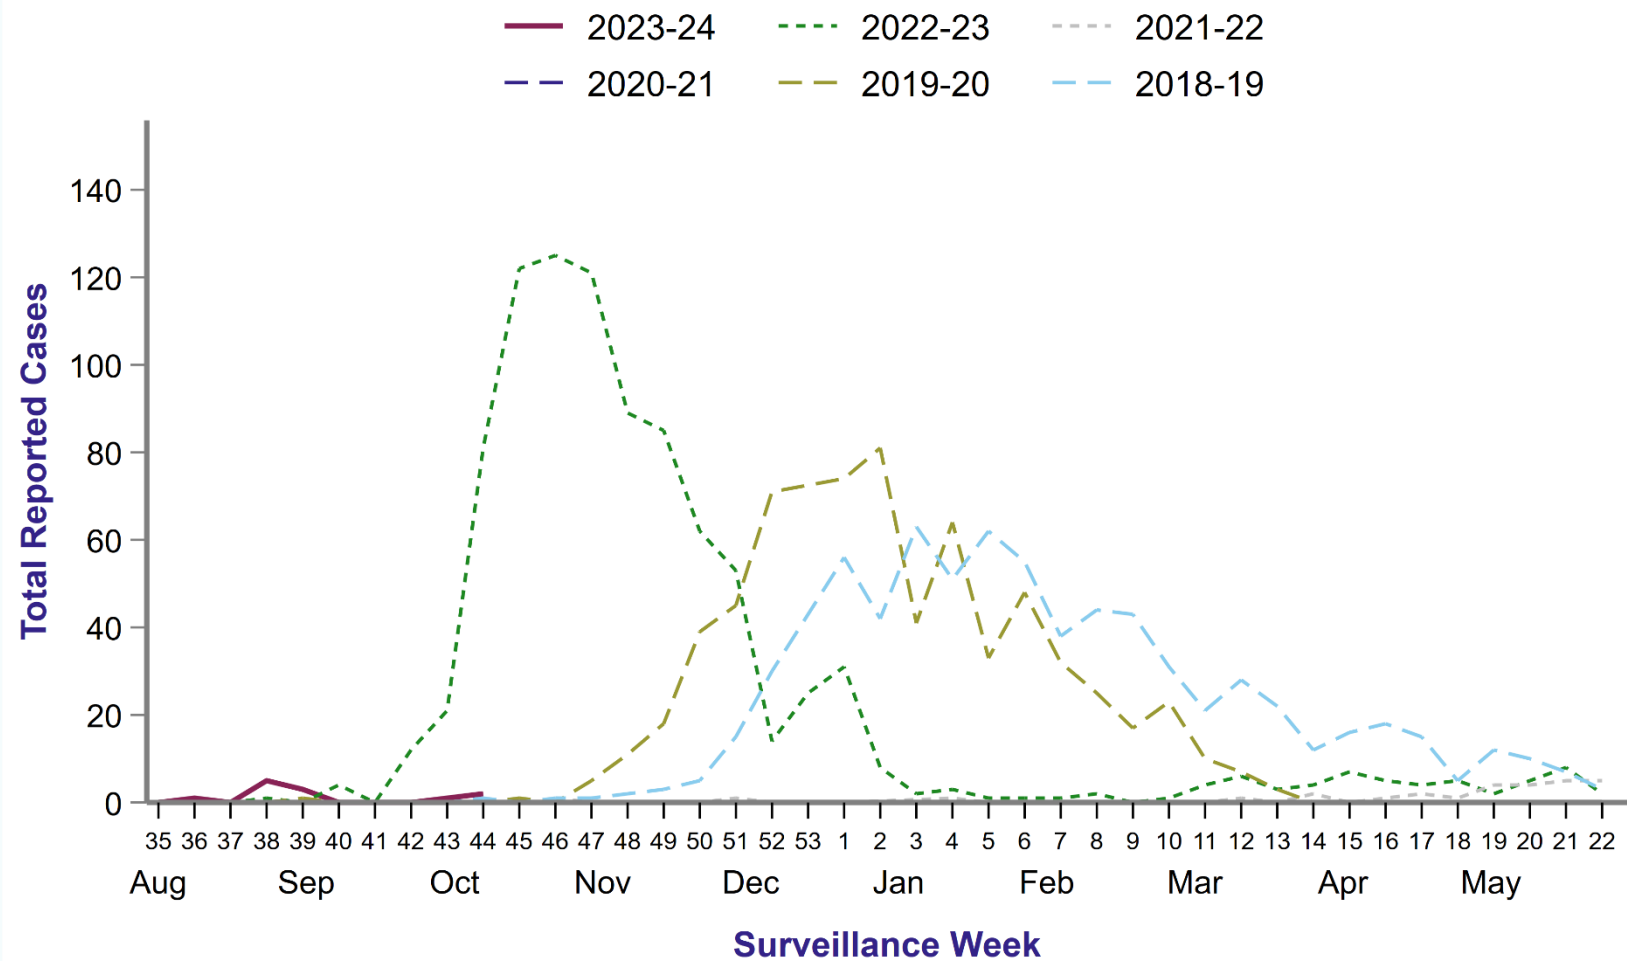

COVID-19: In Simcoe Muskoka, there have been **113 lab-confirmed COVID-19 cases reported** in week 44 – this is similar when compared to week 43.

Table 1: Summary of Influenza and COVID-19 Cases, Simcoe Muskoka, 2023-24 Season

Lab-confirmed Cases	Week 44	Season-to-Date
Influenza	2	12
Influenza A	2 (100%)	11 (92%)
Influenza B	0 (0%)	1 (8%)
Influenza A & B	0 (0%)	0 (0%)
COVID-19	113	969
Data source: Case and Contact Management (CCM) System and Integrated Public Health Information System (iPHIS), extracted on November 07, 2023. Notes: Season-to-Date includes cases reported from the Sunday of the week in which September 1, 2023 falls (i.e., August 27, 2023 onwards).		

Historical Trends – Influenza

Figure 1: Weekly Influenza[^] Counts in Simcoe Muskoka*, Historical Comparison 2018-2019 to 2023-24 (present)

Data Source: Integrated Public Health Information System (iPHIS), extracted on 7 Nov 2023

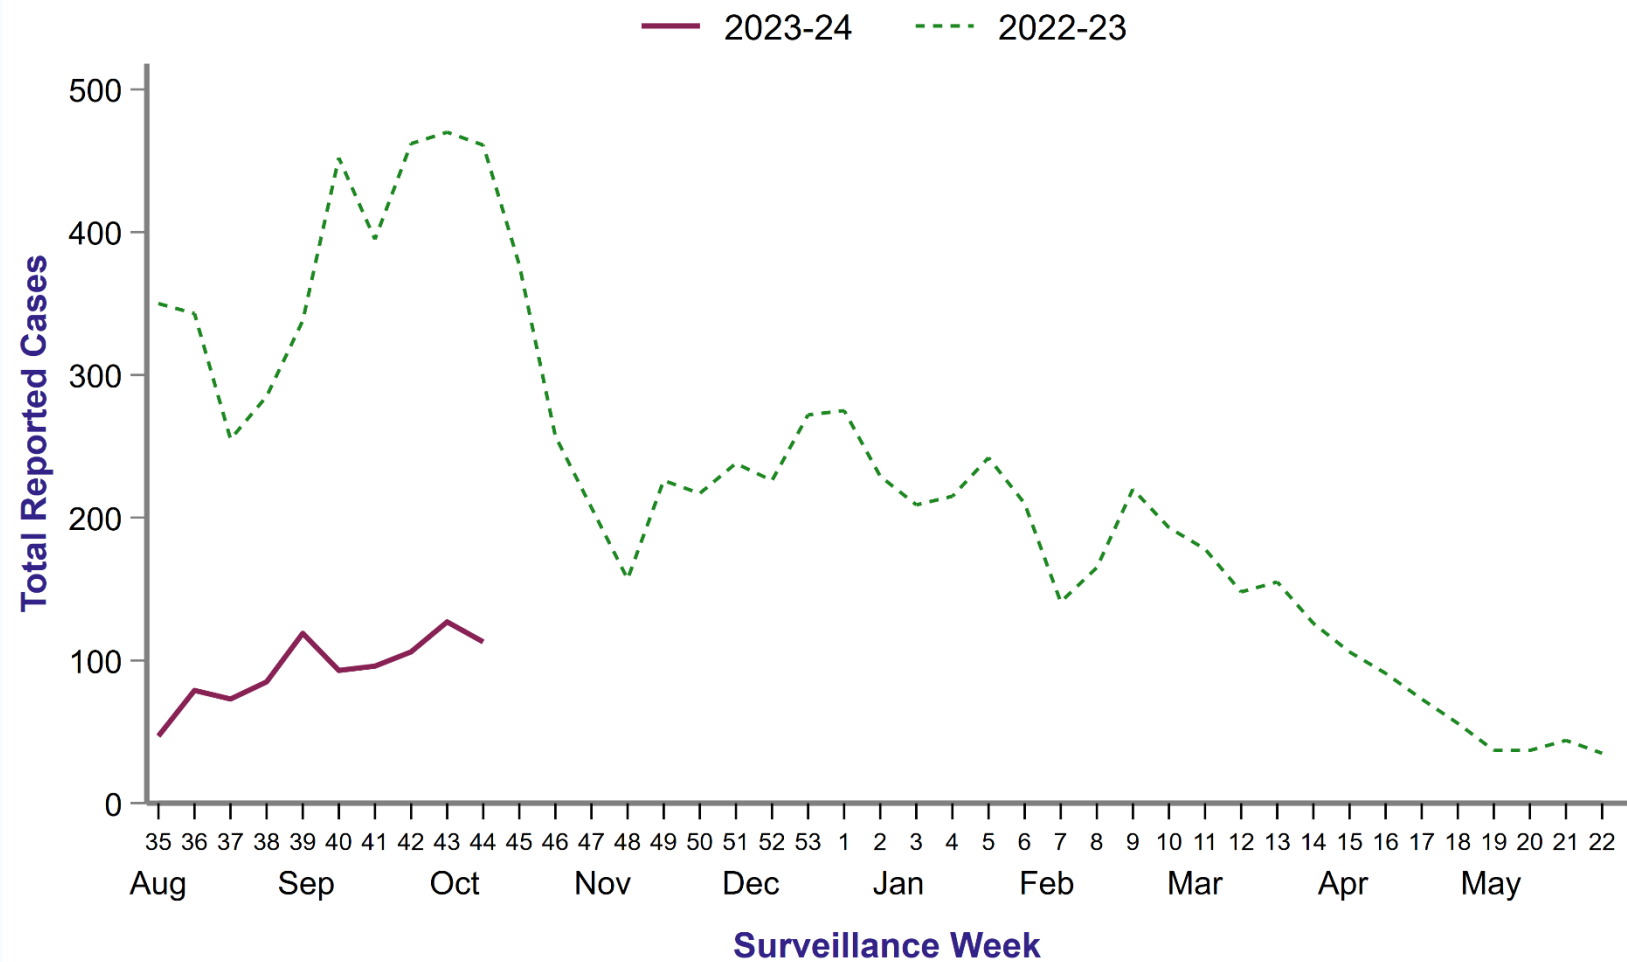

[^]Includes confirmed cases of influenza in Simcoe Muskoka residents.

*Case counts are based on reported date. Reported date is on average 7-10 days after onset date.

For comparability between years, the surveillance week number is used in this graph. The alignment with the dates for the 2023-24 respiratory season is provided for reference. Week 1 always corresponds with the week in which January 1 lands.

Historical Trends – COVID-19

Figure 2: Weekly COVID-19[^] Counts in Simcoe Muskoka*, Historical Comparison 2022-2023 to 2023-24 (present)

Data Source: Case and Contact Management (CCM) System), extracted on 7 Nov 2023

[^]Includes confirmed cases of COVID-19 in Simcoe Muskoka residents.

*Case counts are based on reported date. Reported date is on average 7-10 days after onset date.

For comparability between years, the surveillance week number is used in this graph. The alignment with the dates for the 2023-24 respiratory season is provided for reference. Week 1 always corresponds with the week in which January 1 lands.

Percent Positivity

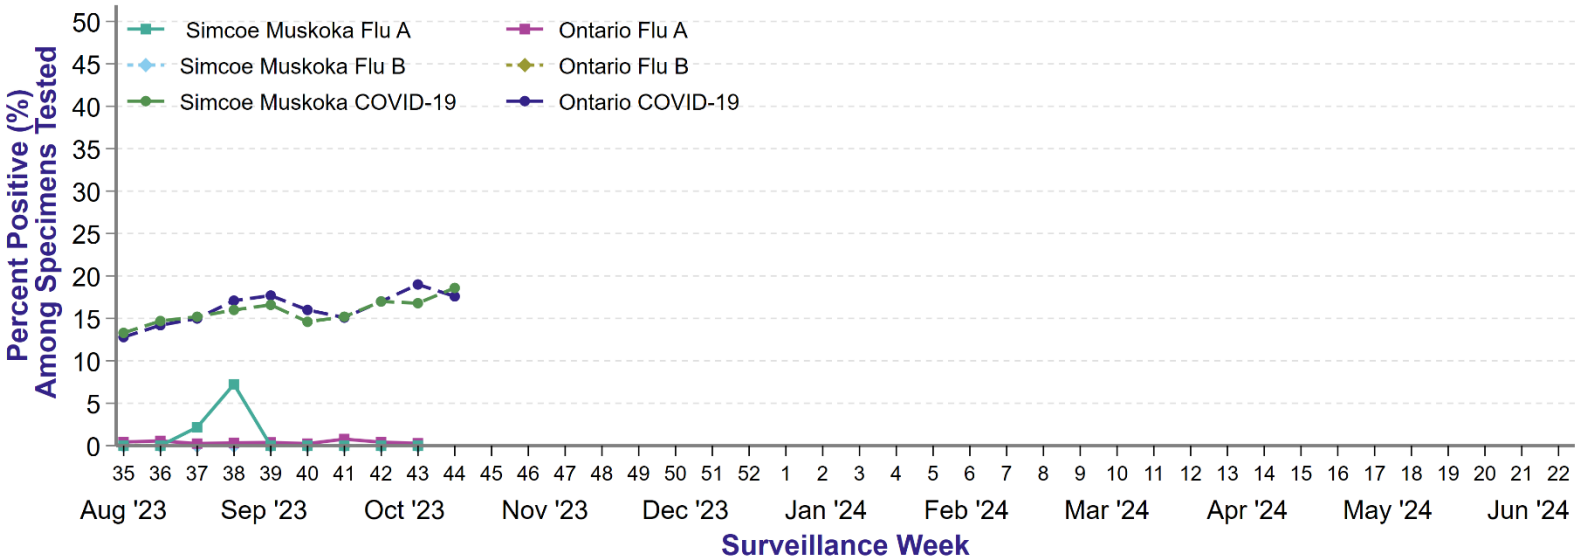

For week 43, the percentage of specimens that are positive (percent positivity) for **Influenza A** is **similar** compared to the previous week provincially. For week 44, provincial percent positivity for **COVID-19** is **similar** compared to the previous week.

Table 2: Percent Positivity for Influenza (week 43) and COVID-19 (week 44), Simcoe Muskoka and Ontario

Region	Influenza A*	Influenza B*	COVID-19
Simcoe Muskoka	0.0%	0.0%	18.6%
Ontario	0.3%	0.0%	17.6%

Data source: Public Health Ontario’s Ontario Respiratory Virus Tool, extracted on November 07, 2023. Summarized data from Ontario Lab Information System (OLIS) COVID-19 test data from Ministry of Health SAS Visual Analytics COVID-19 Testing Report, extracted on November 7, 2023
Note: *Influenza percent positivity is reported with a one week lag and does not include week 44. COVID-19 percent positivity is reported for week 44; provincial data is incomplete and should be interpreted with caution.

Figure 3: Percent Positivity, Influenza A & B, COVID-19, Simcoe Muskoka & Ontario, 2023-24 Season

Data Source: Public Health Ontario Respiratory Pathogen Bulletin, extracted on 7 Nov 2023. Ministry of Health. 2020. Ontario Lab Information System (OLIS) COVID-19 test data from Ministry of Health SAS Visual Analytics COVID-19 Testing Report, extracted on 02 Nov 2023.
* Flu A and B specimens only include those tested at public health laboratories in Ontario. COVID-19 specimens are limited to those undergoing PCR testing.
Note: Simcoe Muskoka percent positivity, particularly for influenza, is based on small numbers of positive tests and should be interpreted with caution. Influenza data in this figure are reported with one week lag and do not include the most recently completed surveillance week. COVID-19 data may be incomplete.

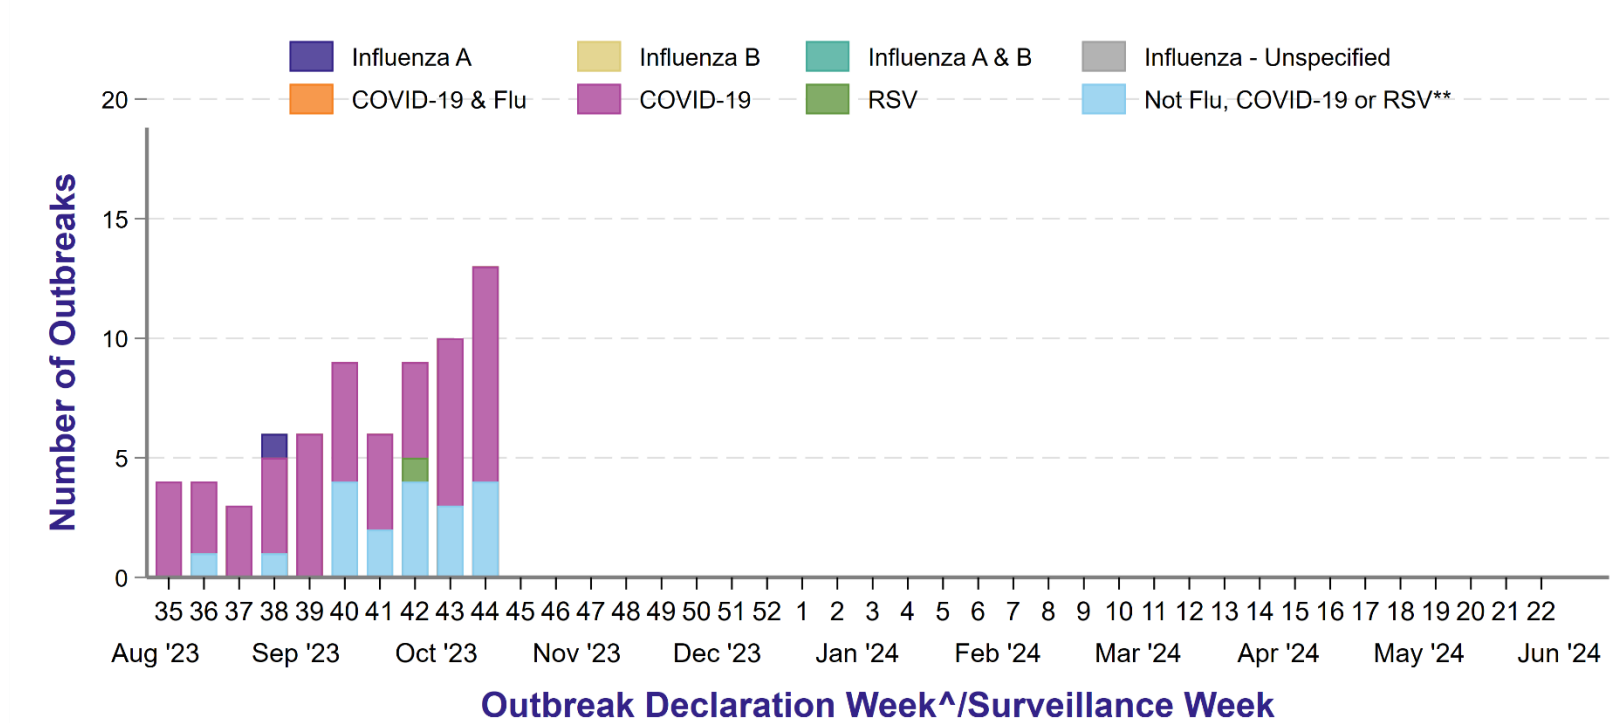

Institutional Respiratory Outbreaks

Since September 1, 2023, there have been **70 lab-confirmed institutional respiratory outbreaks** in Simcoe Muskoka:

Total Influenza:	1 outbreak	COVID-19:	49 outbreaks
Influenza A:	1 outbreak	COVID & Influenza:	0 outbreaks
Influenza B:	0 outbreaks	Respiratory Syncytial Virus (RSV):	4 outbreaks
		Other or Unknown Respiratory Pathogen:	19 outbreaks

Note: Total number of outbreaks by pathogen above may not equal total respiratory outbreaks or Figure 4. Outbreaks with multiple pathogens are counted under each pathogen. Combined COVID-19, influenza and/or RSV outbreaks may be included in the influenza, COVID-19, RSV and/or combined COVID-19 and Flu categories above, as appropriate.

Figure 4: Institutional Outbreaks by Respiratory Pathogen, Simcoe Muskoka, 2023-24 Season

Data Source: Integrated Public Health Information System (iPHIS) & Public Health Case and Contact Management Solution (CCM) extracted by SMDHU on 7 Nov 2023.

* Confirmed outbreaks only. Institutions can include acute care facilities, long-term care homes, retirement homes, corrections facilities and childcare facilities.

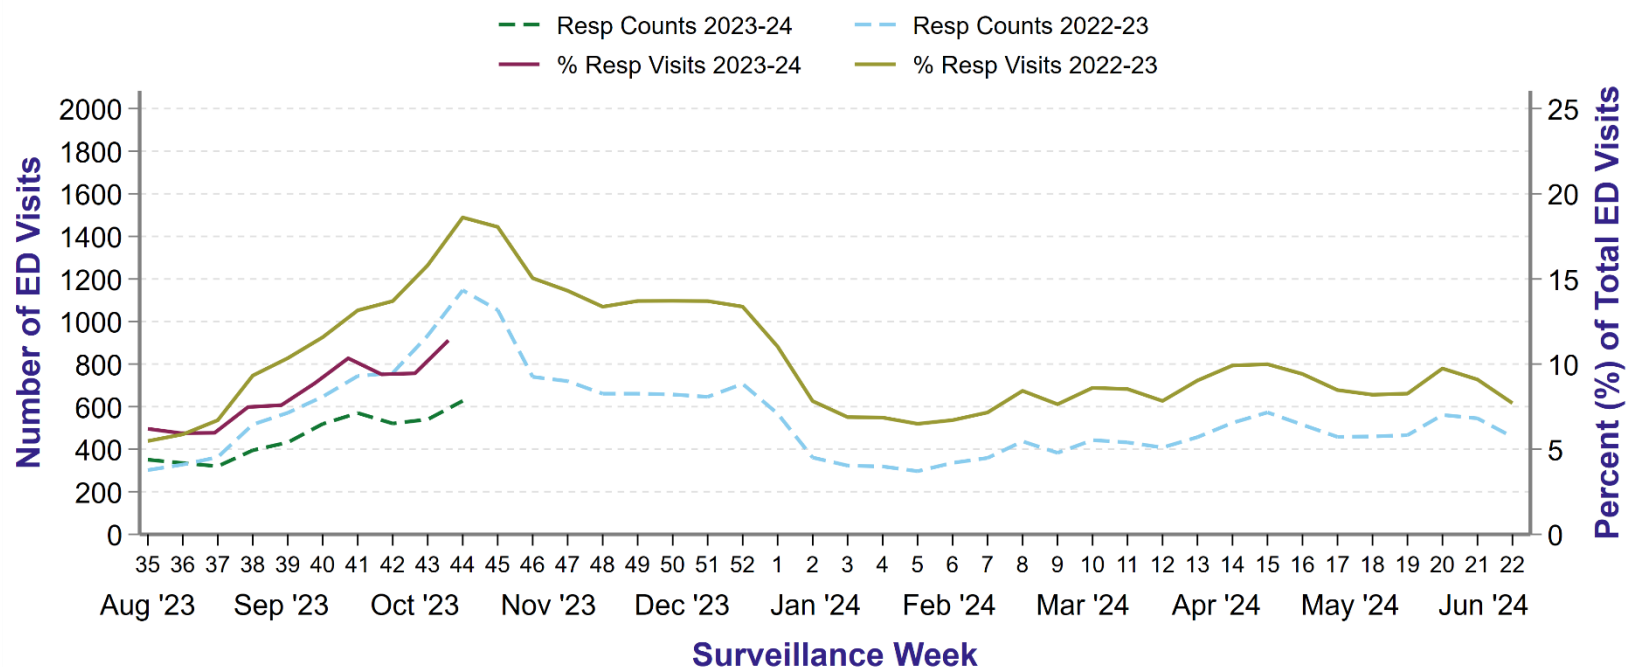

**Includes outbreaks where a respiratory pathogen other than influenza, COVID-19 or RSV is identified, or no pathogen was identified.

^Week declared is the week (Sun-Sat) in which the outbreak became a confirmed outbreak.

Local Emergency Department Visits

Emergency department (ED) visits for respiratory syndrome in Simcoe Muskoka accounted for **11.4% of visits in week 44**. This is **similar** when compared to week 43, and lower when compared to the same time in the 2022-23 season.

Figure 5: Emergency Department Visits for Respiratory Syndrome at Participating Simcoe Muskoka Hospitals, 2022-23 and 2023-24 Seasons

Data Source: Acute Care Enhanced Surveillance (ACES) System, extracted on 7 Nov 2023

^ Respiratory syndrome is defined as 'respiratory infection non-croup, non-bronchiolitis. Includes sore throat, cough, cold, ear infection, blocked ear, earache, etc.' This syndrome does not include influenza-like illness, which is 'fever, myalgia, undifferentiated flu.'

* Participating hospitals are RVH, OSMH, MAH (Bracebridge and Huntsville), GBGH, CGMH and SVMH; includes Simcoe Muskoka residents and visitors.

The above data is provided through Acute Care Enhanced Surveillance (ACES), an emergency department (ED) syndromic surveillance system managed by KFLA Public Health Informatics for participating Ontario hospitals. Seven hospitals participate in Simcoe Muskoka.

Influenza Vaccine Match and Influenza Strains

The quadrivalent 2023-2024 egg-based influenza vaccine for the northern hemisphere contains the following strains:

- A/Darwin/6/2021 (H3N2)-like virus;
- A/Victoria/4897/2022 (H1N1)pdm09-like virus;
- B/Austria/1359417/2021 (B/Victoria lineage)-like virus; and
- B/Phuket/3073/2013 (B/Yamagata lineage)-like virus.

Table 3: Local, Provincial and National Matched and Mismatched Influenza Specimens and National Match Percent, 2023-24 Season

Influenza Strains	Number of Specimens with Strain Characterization Results		National Match Percent [†]
	Ontario	Canada	
Influenza A Vaccine Strains			
Influenza A (H3N2) A/Darwin/6/2021-like	NR	NR	NR
Influenza A (H1N1) A/Wisconsin/588/2019 pdm09-like	NR	NR	NR
Influenza B Vaccine Strains			
B/Austria/1359417/2021 (B/Victoria)-like	NR	NR	NR
B/Phuket/3073/2013 (B/Yamagata)-like (Quad vaccine only)	NR	NR	NR

Data Source: Government of Canada, [FluWatch Surveillance Report](#), Influenza Strain Characterization, extracted November 7, 2023.

Provincial and national counts are reported with one week lag and do not include the most recently completed surveillance week. Surveillance weeks can be found [here](#).

† Non-vaccine match strains are not reported. Percent match is based on antigenically similar strains. Denominator = NR (Flu A), NR (Flu B).

NR = Not Reported

COVID-19 2023/24 Vaccination Campaign

Table 4: COVID-19 Vaccination Uptake among Simcoe Muskoka Residents

Vaccination Indicator	Time Period	
	Cumulative (Sept 17 – Nov 04)	Increase From Previous Week (Oct 29 – Nov 04)
# of Doses Administered Inside Simcoe Muskoka Since September 17, 2023		
Any Health Canada Approved COVID-19 Vaccine	39,873	15,341
# (%) of the Simcoe Muskoka Population with a Dose of COVID-19 Vaccine Since September 17, 2023		
All Ages	38,896 (6.1%)	15,185 (2.4%)
<5	92 (0.3%)	30 (0.1%)
5-17	368 (0.4%)	201 (0.2%)
18-64	11,263 (2.9%)	4,731 (1.2%)
65+	27,173 (20.9%)	10,223 (7.9%)

Data Source: COVaxON, IntelliHEALTH ONTARIO, extracted by SMDHU on: November 7, 2023. 2022 population estimates from Statistics Canada (Table: 17-10-0139-01, downloaded January 30, 2023) were used as the denominators for the coverage rates.

Health Canada approved COVID-19 vaccine doses administered inside of Simcoe Muskoka on or after September 17, 2023. This includes vaccine doses administered through all channels (e.g., health unit, pharmacy, physician offices, etc.) and to all individuals regardless of residential address.

Number (and per cent) of the Simcoe Muskoka population receiving a dose of Health Canada approved COVID-19 vaccine on or after September 17, 2023. This includes all individuals with a residential address inside of Simcoe Muskoka, regardless of where the dose was administered.

COVID-19 vaccine doses include all products approved by Health Canada. For the full list of approved vaccines visit: <https://www.canada.ca/en/health-canada/services/drugs-health-products/covid19-industry/drugs-vaccines-treatments/vaccines.html>

Cumulative period runs from September 17, 2023, onward. Weeks are based on a Sunday to Saturday basis. Data is limited to complete weeks for comparability.

Technical Notes

Definitions

Influenza vaccine match: Of influenza specimens submitted to the National Microbiology Lab, the proportion that are antigenically or genetically similar to one of the four flu components in the current season's influenza vaccine for the Northern Hemisphere.

Percent positivity: The number of positive influenza or COVID-19 cases divided by the number of specimens tested. For influenza this is limited to specimens tested at Public Health Ontario Labs. For COVID-19, it is limited to PCR testing.

Reported activity level: The level of influenza activity that is reported to Public Health Ontario by Simcoe Muskoka, based on influenza cases and outbreaks. Definitions available [here](#).

Reported community risk level: The level of COVID-19 risk based on the Simcoe Muskoka [COVID-19 Community Risk Level](#).

Surveillance week: The week number corresponding to the week of the year, running Sunday to Saturday, inclusive, for reporting influenza activity. January 1 always falls within week 1. A list of the current season's surveillance weeks can be found [here](#).

Limitations

Case Reporting: Sporadic cases do not accurately describe all cases of influenza and/or COVID-19, as cases reported are skewed towards individuals more likely to seek medical care and be tested. Cases are reported based on where an individual normally lives which may not match where they acquired the illness.

Data Comparison: The indicators used in this report are different from those presented in the [COVID-19 Community Risk Level](#) and cannot be directly compared. Differences may be due to data reporting lag and/or indicator definitions.

Timeliness: Provincial data are lagged by one week compared to all other data presented in this update due to data availability. The number of cases and/or outbreaks and percent positivity reported for a given surveillance week may change as more information becomes available.

Week 43 Provincial Summary

For the 2023-2024 surveillance season to week 43:

Influenza: 301 laboratory-confirmed influenza cases have been reported across Ontario, 52 (17%) of which were reported in week 43. Among cumulative cases, 87% (262/301) are influenza A. Of the 75 reported influenza A cases with subtype information available, 23% (17/75) were H3 and 77% (58/75) were (H1N1)pdm09.

COVID-19: 23,721 laboratory-confirmed COVID-19 cases have been reported across Ontario, 3,415 of which were reported in week 43.
