

Weekly Influenza News

Week 45: November 4 to November 10, 2018

Week in Review:

Influenza Activity Indicator	Assessment of Indicator*	Interpretation
 <u>Reported cases</u>	Lower	0 local lab-confirmed case reported in week 45 ; 1 cases reported in week 44
 <u>Percent Positive of Flu Specimens[†]</u>	Similar	Simcoe Muskoka: - flu A (0.0%); flu B (0.0%) Ontario: - flu A (1.1%); flu B (0.5%)
 <u>Local Institutional Outbreaks</u>	Similar	No influenza outbreaks reported for the 2018-19 season to date.
 <u>Local Emergency Department respiratory visits: week 45</u>	Similar	Percentage of visits is similar to previous week and to the same period for the 2017-18 season.
Week 45 Overall Assessment November 4 to November 10, 2018	Lower	Reported Activity Level: No activity
		No cases of Flu A reported in SMDHU this week. No Flu B activity reported in SMDHU
 <u>Predominant Influenza Strains:</u> Influenza A		

Notes: Reported activity level is based on the weekly submission of [Appendix C](#) to Public Health Ontario. Definition available [here](#).

*Compared to previous [surveillance week](#)

† Reported for week 44

Reported Local Influenza Cases

In Simcoe Muskoka, there has been **one lab-confirmed influenza case reported** as of 13 November 2018, reported in week 44. No cases of influenza were reported in week 45.

The one reported influenza A case has not been subtyped.

🔗 Figure 1 and Figure 2 below provide historic comparisons

Table 1: Summary of influenza cases for 2018-19 season

Lab-confirmed Influenza Cases	Week 45		Season-to-Date	
	N	%	N	%
Influenza A	0	0%	1	100%
Influenza B	0	0%	0	0%
Influenza A & B	0	0%	0	0%
Total	0	0%	1	100%

Figure 2: Reported Influenza Cases, Type B, Current Influenza Season with Historical Comparison, Simcoe Muskoka

Percent positivity

Note: Percent positivity is reported with one week lag and does not include week 45.

The percentage of flu specimens that are positive (percent positivity) for Influenza A and Influenza B remains low. The provincial percent positivity for influenza A in week 44 was reported at 1.1%, which is similar when compared to week 43. Influenza B percent positivity was reported at 0.5% for week 44.

Locally for week 44, percent positivity for influenza A and influenza B were both reported at 0.0%.

Figure 3: Percent Positivity, Influenza A & B, Simcoe Muskoka & Ontario, 2018-19

Institutional Respiratory Outbreaks

There have been no *lab-confirmed institutional flu outbreaks* in Simcoe Muskoka since September 1, 2018.

Figure 4: Institutional Outbreaks by Respiratory Pathogen, Simcoe Muskoka, 2018-19

Local Emergency Department Visits

Emergency department visits for respiratory syndrome in Simcoe Muskoka accounted for 8.9% of visits in week 45. This is similar when compared to week 44, and similar when compared to the same point in the 2017-18 season.

Figure 5: Emergency Department Visits for Respiratory Syndrome at Participating Simcoe Muskoka Hospital, 2017-18, 2018-19 Seasons

Vaccine Match and Influenza Strains

The trivalent 2018-2019 influenza vaccine for the northern hemisphere contains the following strains:

- A/Michigan/45/2015 (H1N1)pdm09-like virus;
- A/Singapore/INFIMH-16-0019/2016 (H3N2)-like virus; and
- B/Colorado/06/2017-like virus (B/Victoria/2/87 lineage).

Table 2: Local, Provincial and National Matched and Mismatched Flu Specimens and National Match Percent, 2018-19

Influenza Strains	Number of Specimens with Strain Characterization Results		National Match Percent [†]
	Ontario	Canada	
Influenza A Vaccine Strains			
Influenza A (H3N2) A/Singapore/INFIMH-16-0019/2016-like	0	1	6%
Influenza A (H1N1) A/Michigan/45/2015-like	0	17	94%
Influenza B Vaccine Strains			
B/Colorado/06/2017-like	0	0	0%
B/Phuket/3073/2013-like virus (Quad vaccine only)	0	0	0%

Data Source: Ontario and Canada Counts: Public Health Ontario Respiratory Pathogen Report, Table 7: Strain characterization completed on influenza isolates at the National Microbiology Laboratory Surveillance week 44, extracted November 13, 2018.

Provincial and national counts are reported with one week lag and do not include the most recently completed surveillance week. Surveillance weeks can be found [here](#).

[†] Non-vaccine match strains are not reported. Percent match is based on antigenically similar strains. Antigenic similarity may not be reflective of influenza vaccine effectiveness.

As of week 44, two additional specimens did not grow to sufficient hemagglutination titers for antigenic characterization, but were found to be of the same genetic group as A/Singapore/INFIMH-16-0019/2016-like virus through sequence analysis.

Technical Notes

Definitions

Percentage positivity: the number of positive flu cases divided by the number of specimens tested at Public Health Ontario Labs

Reported activity level: the level of influenza activity that is reported to Public Health Ontario by Simcoe Muskoka, based on influenza cases and outbreaks. Definitions available [here](#).

Surveillance week: The week number corresponding to the week of year, running Sunday to Saturday, inclusive, for reporting influenza activity. January 1 always falls within week 1. A list of the current season's surveillance weeks can be found [here](#).

Limitations

Timeliness:

The provincial data are from one week previous because that is the most recent data available.

The hospital data, local counts of influenza, and outbreaks are current to date.

The number of cases listed in a given surveillance week may change as more information becomes available

Case-Follow-up and iPHIS Data Entry:

While Public Health Ontario only requires case information as provided by the laboratory report, the health unit investigates all outbreak cases, as information is available, in order to provide a more accurate local picture of adverse outcomes and subtyping.

Case Reporting:

Sporadic cases do not accurately describe all cases of influenza as those cases reported are skewed towards individuals more likely to seek medical care and be tested (e.g. young, elderly and immunocompromised).

Week 44 Provincial Summary: For the 2018-2019 surveillance season to week 44, 75 laboratory-confirmed influenza cases have been reported across Ontario, 24 (32.0%) of which were reported in week 44. Among cumulative cases, 88.0% (66/75) were influenza A. Of the 26 reported influenza A cases with subtype information available, 69.2% (18/26) were H3N2 and 30.8% (8/26) were (H1N1)pdm09.
