

Weekly Influenza News

Week 52: December 20 to December 26, 2020

Week in Review:

Influenza Activity Indicator	Assessment of Indicator*	Interpretation
<u>Reported cases</u>	Similar	0 local lab-confirmed cases reported in week 52 ; 0 cases reported in week 51
<u>Percent Positive of Flu Specimens[†]</u>	Similar	Simcoe Muskoka: - flu A: 0.0%; flu B: 0.0% Ontario: - flu A: 0.0%; flu B: 0.0%
<u>Local Institutional Outbreaks</u>	Similar	No institutional flu outbreaks declared in week 52 ; none in week 51
<u>Local Emergency Department respiratory visits: week 52</u>	Similar	Percentage of visits is <i>similar</i> compared to previous week and <i>lower</i> compared to the same period in the 2019-20 season
Week 52 Overall Assessment December 20 to December 26, 2020	Similar	Reported Activity Level: No activity 0 cases of Flu A in SMDHU this week 0 cases of Flu B in SMDHU this week
<u>Predominant Influenza Strains:</u> N/A		

Notes: Reported activity level is based on definitions available [here](#).

*Compared to previous [surveillance week](#)

† Reported for week 51

Technical Notes

Definitions

Percentage positivity: the number of positive flu cases divided by the number of specimens tested at Public Health Ontario Labs

Reported activity level: the level of influenza activity that is reported to Public Health Ontario by Simcoe Muskoka, based on influenza cases and outbreaks. Definitions available [here](#) (page 8)

Surveillance week: The week number corresponding to the week of year, running Sunday to Saturday, inclusive, for reporting influenza activity. January 1 always falls within week 1. A list of the current season's surveillance weeks can be found [here](#) (Appendix B)

Limitations

Timeliness:

The provincial data are from one week previous because that is the most recent data available.

The hospital data, local counts of influenza, and outbreaks are current to date.

The number of cases listed in a given surveillance week may change as more information becomes available

Case-Follow-up and iPHIS Data Entry:

While Public Health Ontario only requires case information as provided by the laboratory report, the health unit investigates outbreak cases, as information is available, in order to provide a more accurate local picture of adverse outcomes and subtyping.

Case Reporting:

Sporadic cases do not accurately describe all cases of influenza as those cases reported are skewed towards individuals more likely to seek medical care and be tested (e.g. young, elderly and immunocompromised).
