## Week 52: December 26, 2021 to January 1, 2022

### Week in Review:

Influenza Activity Indicator	Assessment of Indicator*	Interpretation
<u>Reported cases</u>	Similar	0 local lab-confirmed cases reported in week 52; 0 cases reported in week 51
<u>Percent Positive of Flu Specimens<sup>†</sup></u>	Similar	Simcoe Muskoka: - flu A: 0.0%; flu B: 0.0% Ontario: - flu A: 0.0%; flu B: 0.0%
<u>Local Institutional Outbreaks</u>	Similar	No institutional flu outbreaks declared in week 52; none in week 51
<u>Local Emergency Department respiratory visits: week 52</u>	Similar	Percentage of visits is <i>similar</i> compared to previous week and <i>higher</i> compared to the same period in the 2020-21 season
<b>Week 52 Overall Assessment</b> December 26, 2021 to January 1, 2022	Similar	<b>Reported Activity Level: No activity</b> 0 cases of Flu A in SMDHU this week 0 cases of Flu B in SMDHU this week
<u>Predominant Influenza Strains:</u> N/A		

**Notes:** Reported activity level is based on definitions available [here](#) (page 8).

\*Compared to previous [surveillance week](#) (Appendix B)

† Reported for week 51.

## Technical Notes

### Definitions

**Percentage positivity:** the number of positive flu cases divided by the number of specimens tested at Public Health Ontario Labs

**Reported activity level:** the level of influenza activity that is reported to Public Health Ontario by Simcoe Muskoka, based on influenza cases and outbreaks. Definitions available [here](#) (page 8)

**Surveillance week:** The week number corresponding to the week of year, running Sunday to Saturday, inclusive, for reporting influenza activity. January 1 always falls within week 1. A list of the current season's surveillance weeks can be found [here](#) (Appendix B)

### Limitations

#### Timeliness:

The provincial data are from one week previous because that is the most recent data available.

The hospital data, local counts of influenza, and outbreaks are current to date.

The number of cases listed in a given surveillance week may change as more information becomes available

#### Case-Follow-up and iPHIS Data Entry:

While Public Health Ontario only requires case information as provided by the laboratory report, the health unit investigates outbreak cases, as information is available, in order to provide a more accurate local picture of adverse outcomes and subtyping.

#### Case Reporting:

Sporadic cases do not accurately describe all cases of influenza as those cases reported are skewed towards individuals more likely to seek medical care and be tested (e.g. young, elderly and immunocompromised).

**Week 50 Provincial Summary\*:** For the 2021-2022 surveillance season to week 50, 39 laboratory-confirmed influenza cases have been reported across Ontario, 1 (3%) of which was reported in week 50. Among cumulative cases, 90% (35/39) have been influenza A.

(Source: Public Health Ontario Respiratory Pathogen Bulletin, Surveillance Week 50, extracted January 18, 2022).

\*Note the number of cases in Provincial Summary above may not match Percent Positive indicator in Table on page 1. This is because the Percent Positive is based on specimens tested at Public Health Ontario labs only, and the Provincial Summary above includes reported cases from all labs in Ontario including hospital and other private labs. The data source for the latter is the Integrated Public Health Information System (iPHIS) which is the reportable disease database for public health units. Provincial data for week 51 were not available at the time of distribution.
